We would like to express our gratitude and special thanks to the executive management of Mapple University.

Hüseyin Şimşek
Founder and Chairman of the Board of Trustees

Prof. Dr. Şaban Karaca
Rector

Prof. Dr. Betül Çebiçkesen
Vice-Rector

Prof. Dr. Belma Akgül
Vice-Rector

Dr. M. Nur Oğuz
Secretary General

Mapple Üniversitesi yönetimine teşekkürlerimizi sunmak ve minnettarlığımızı göstermek istiyoruz.

Hüseyin Şimşek
Kurucu ve Mütevelli Heyet Başkanı

Prof. Dr. Şaban Karaca
Rektör

Prof. Dr. Betül Çebiçkesen
Rektör Yardımcısı

Prof. Dr. Belma Akgül
Rektör Yardımcısı

Dr. M. Nur Oğuz
Genel Sekreter
developed with insidious symptoms. It is important for the doctor to suspect this disease at the time of application and to conduct research in this regard. As health care workers, we should take this risk into account, taking into account ourselves and our patients. We should also try to minimize the risk factors (obesity, smoking). Of course, any patient with symptoms such as sudden weight loss, fatigue, jaundice is not cancer. But at the outset, we must recognize these anomalies of health-care professionals and their patients and refer them to the health care facility. Every anomaly in our bodies is a cause. If cancer is detected early and surgical removal of the tumor is possible, the 5-year survival rate is 29%. We are the ones who will create this awareness. So let’s first consider the anomalies in our bodies, in our environment and in our patients. Remember, early diagnosis and diagnosis saves lives.
research, get acquainted with some cases of medical practice, using the results of surveys conducted by doctors, anthropology and sociology of health and illness, studying the qualitative research methods.

Well-known medical anthropologists Nancy Scheper-Hughes and Ruth Mackin, sided with the general theory of morality and fought for human rights in the cultural communities in which they conducted their field work. They suggested that cultural and moral relativism is not suitable for a world in which we live. And we should put ethics into the foundation of anthropology. That, the point of view of the fundamental difference, or the regulatory gap between the descriptive anthropology and ethics, is not shared by all researchers.

Medicine is the science and practice of the diagnosis, treatment, and prevention of disease. Medicine encompasses a variety of health care practices evolved to maintain and restore health by the prevention and treatment of illness. Medicine is one of the most important things that people always need in their daily life. Sometimes people can’t predict when and where they get sick, so they don’t prepare what the medicines they can use for treatment the illness. In emergency situations, people need some medicines as fast as possible to prevent the disease becoming more serious.

To solve these issues, MedCom has a solution by offering its services. MedCom is the mobile application that helps people get their medicine immediately without going outside their house. There are three types of services offered, MedCom-Consult, MedCom-Order, and MedCom-Help. Moreover, MedCom aims to improve sales and promotions of country hospitals and drugstores.

Tip: Take your, learn and have applications for your illnesses. If you have liver, heart, or kidney problems, you should know about the medicines you take. It’s very important to know the side effects of the medicines you take.
